

Mac VSCode JavaScript environment setting

1. Download and install node.js here: <https://nodejs.org/en/>
2. Open VSCode and install JavaScript (ES6) code snippets

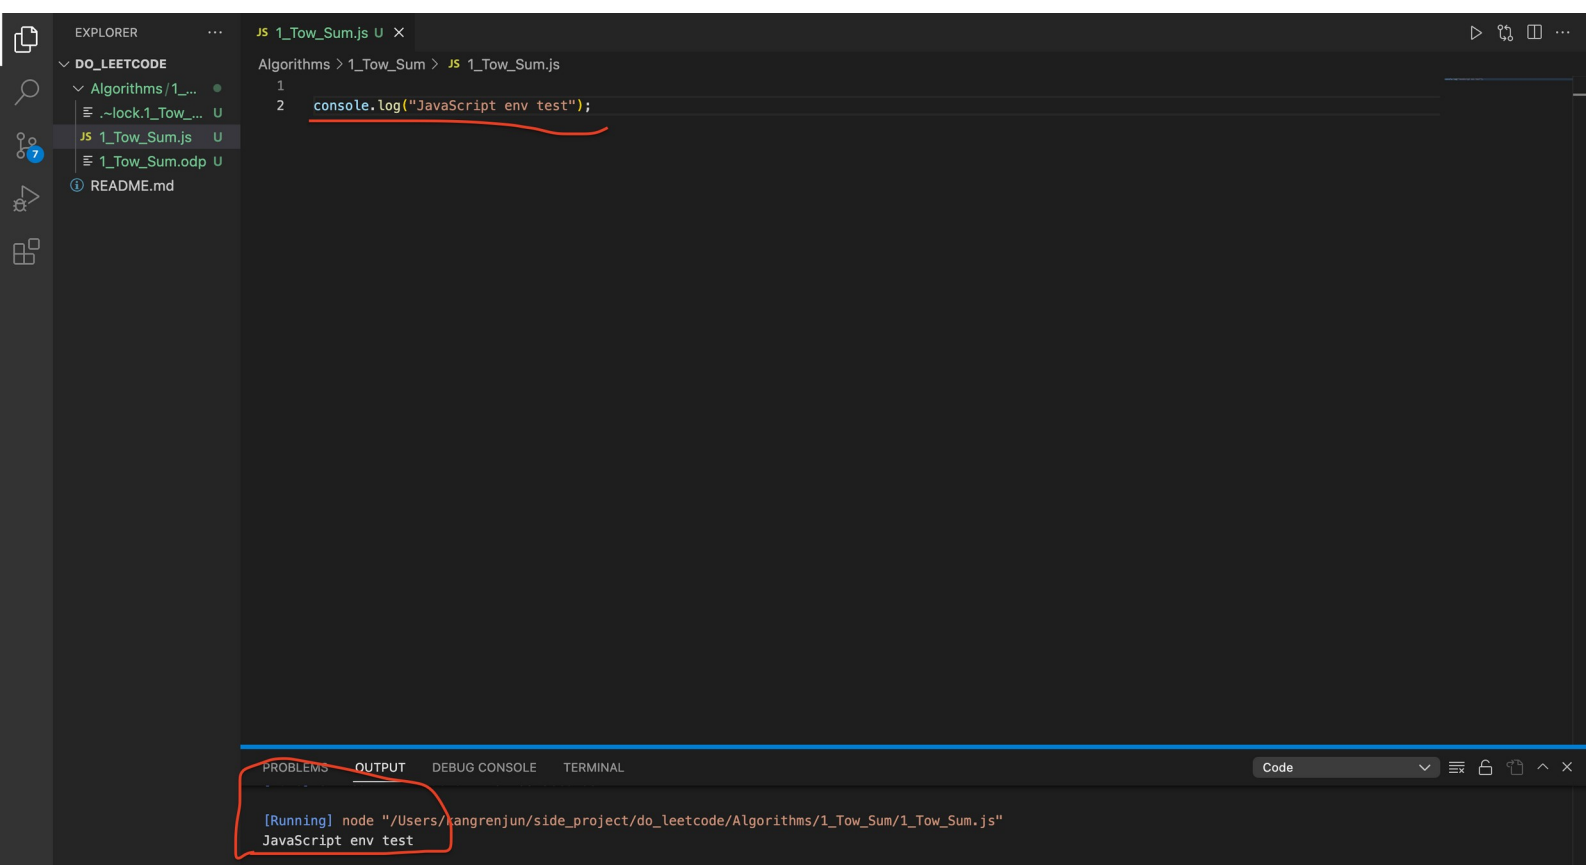

3. install .run

4. press control + option + N , then this will show

5. press it, then console will show

The screenshot shows the Visual Studio Code interface. In the Explorer sidebar on the left, the file `1_Tow_Sum.js` is selected. The main editor displays the content of `1_Tow_Sum.js`, which contains a single line of code: `console.log("JavaScript env test");`. This line is underlined in red. At the bottom of the window, the Output panel is active, showing the command `[Running] node "/Users/kangrenjun/side_project/do_leetcode/Algorithms/1_Tow_Sum/1_Tow_Sum.js"` and its output: `JavaScript env test`. The output text is also underlined in red.
